

Vestry Hub — Product Specification

What is Vestry Hub?

Vestry Hub is a multi-tenant SaaS church management system. Each church is a separate tenant identified by a `tenant_id`. Data must be completely isolated between tenants.

User Roles

- Admin: Full access to manage church data
- Member: Limited access to their own church's member-facing pages

Critical Testing Requirements

Authentication

- Unauthenticated users must be redirected to login
- Admins can access `/dashboard`, `/members`, `/groups`, `/house-fellowships`, `/families`, `/sermons`, `/livestreaming`, `/ai-tools`, `/outreach`, `/training`
- Members can only access `/member/*` routes
- Members cannot access admin routes

Multi-Tenant Isolation

- All data must be filtered by `tenant_id`
- One church cannot see another church's data

- Every Supabase query must include tenant_id filter

Key Features to Test

1. Members page — CRUD operations
2. Groups page — create group, add members
3. House Fellowships — create fellowship, assign members
4. Sermons & Messages — create, publish, member views
5. Livestreaming — go live toggle, prayer requests, past streams archive, countdown timer
6. AI Tools — all 6 tools generate output
7. Bible Explorer — read, search, highlight, bookmark
8. Give Online — giving form submission
9. Events — create event, member RSVP
10. Announcements — create, member views

Forms to Validate

- All forms must reject empty required fields
- URL fields must validate format
- Date fields must reject past dates where applicable
- Number fields must reject negative values

Performance Requirements

- Pages must load within 3 seconds
- No infinite loading states
- No blank white screens
- Realtime subscriptions must not cause memory leaks
